

Cobalt Application – Features & Usage Guide

1.Duel Data Views

- Feature: You can toggle between the Original Raw Tables and the Normalized versions of those tables.
- How to Use:
 - Use the dropdown labeled “View”.
 - Select either “Original” or “Normalized”.
 - The “Table” dropdown will update with the appropriate list of tables based on your selection.

2.Table Selector

- Feature: Select any table to view its data
- How to Use:
 - After selecting a view type, click the “Table” dropdown.
 - Choose a table name from the list

3.Load Table Data

- Feature: Displays the contents of the selected table.
- How to Use:
 - After selecting a table, click the “Load” button.
 - The data will appear in a scrollable table below.

4.Clear Table View

- Feature: Removes the current table data from the view.
- How to use:
 - Click the “Clear” button to reset the table view.

5. Interactive Table Row Inspection

- Feature: View full details of a specific row
- How to use:
 - Click once on any row in the table.
 - A popup will show all column values from the selected row so that you can easily see all data.

6. Stored Procedures Execution

- Two stored SQL procedures can be run directly through the UI.
1. CleanIndicatorValue()
 - Feature: Cleans values in the resources table that end in .111 (removes the indicator)
 - How to use:
 - Navigate to the “Stored Procedures” tab in the top left.
 - Click “Run CleanIndicatorValue()” on the left side.
 - The cleaned data will appear in the result table below.
 2. CommodityAndFeatuLookout()
 - Feature: Filters data by commodity and feature type (e.g., cobalt, deposit)
 - How to use:
 - Navigate to the “Stored Procedures” tab in the top left.
 - On the right side, enter:
 - A commodity (e.g., Cobalt)
 - A feature type (e.g., Deposit)
 - Click “Run Lookout”
 - The filtered results will display below.

7. Procedure Results Table

- Feature: View results from procedures in a dedicated table
- How to use:
 - Output from either procedure will be shown in the bottom half of the “Stored Procedures” tab.
 - Click any row to see popup with full details.

8.Input Reset on Tab Change

- Feature: Automatically clears the user input fields for commodity and feature type.
- How to Use:
 - When you switch to the “Stored Procedures” tab, the user input text fields will reset automatically so that you don’t have to manually delete them.

9.Table Column Auto-Resize

- Feature: Automatically adjust table columns widths to fit the content in that column.
- How to use:
 - Happens automatically when the data is loaded.
 - Makes columns readable without cutting off content or have excessively big columns.

10.Row Sorting

- Feature: Sorts columns by clicking their headers
- How to use:
 - Click on a column header in either table to sort the rows ascending/descending.
